## 0.1 Simple mathematical functions

Let us assume that we would like to compute the functions  $f_k(x)$  in the interval  $x \in [0, 40]$ . The functions are  $f_1(x) = \sin(0.2 \cdot x)$ ,  $f_2(x) = \cos(0.12 \cdot x)$  and  $f_3(x) = \exp(-0.01 \cdot x) \cdot [\sin x + 0.5 + 2 * \cos x]$ . We compute these functions for 500 discrete values of  $x$  in the given interval, and then plot these functions.

Function Plots

8
9  — Set up an array for the x-values
10 ar = tmath.Matrix(200)
11 ar:SetLinearRows(0,80)
12 — Apply the first function
13 h=tmath.Sin(ar, 0.2)
14 final=h*1
15 — Same for second function and append to result
16 h=tmath.Cos(ar, 0.12)
17 final=final:AppendCols(h)
18 — Ditto for third function
19 fun1=tmath.Exp(ar, -.01)
20 fun1 = tmath.CWise(ar*(-.01), math.exp);
21 fun2=tmath.Sin(ar)
22 fun3=tmath.Cos(ar)
23 fun=fun1-fun2+fun3*2
24 print("fun", fun)
25 final=final:AppendCols(fun)
26 print("final", final)
27
28 — Create graphics window and plot functions
29 w = tnggraphics.TNGVisualize(.1, .1, .4, .4, "Welcome to SLangTNG!")
30 w:SetLabels("Function Plots", "x-Values", "f-Values")
31 w:Hold(true)
32 w:Plot(ar, final)
33
34 z=tmath.Matrix(1,10)
35 z:SetLinearCols(10, 70)
36
37 zz = tmath.Cos(z, 0.2)
38 print("zz", zz)
39 w:Plot(z, zz, -.01, 3) — Symbol size < 0: plot only symbol
40 w:Plot(z, tmath.Sin(z), .01, 1) — Symbol size >= 0 plot line and symbol
41 col=tmath.Matrix(4)
